Allergy, Dermatology, and Otolaryngology

Dr. Keith A Hnilica DVM, MS, DACVD

PREVENTION: INFECTION AND POLLEN AVOIDANCE

1. To reduce MRStaph infection risk, avoid steroids and Apoquel.

Bathe every 3-7 days with a **disinfecting shampoo** to wash off pollens and kill bacteria and yeast.

Apply the disinfecting **Torb-D lotion** to red itchy spots in-between the baths to prevent infection.

Place ear cleaner/medicine in the ear canal after every bath (every 3-7 days)

OR place LETK infusion in each ear every 1 - 2 weeks.

WIPE the feet, chin, and face folds off with baby wipes at bedtime.

Always wipe in the direction of hair growth to remove any ingrown hairs.

2. Antihistamines help reduce the skin irritation and have few side effects.

In the **MORNING** (and up to every 12 hours) give **Zyrtec**, Allegra, or Claritin

At **BEDTIME** (and up to 3 times each day for severe itching) give Benadryl (25mg).

3. Avoid BEEF, DAIRY, CHICKEN in the food forever.

(READ THE INGREDIENT LIST!!)

Select Lamb, Rabbit, Duck, or SALMON

OTC diets like Wellness Simple, Canidae, Natural Balance, Blue Basics, Natural Planet, Merrick, and Zignature work well.

4. Give **1000mg of EPA** (Essential Fatty Acids) (fish, flax, **SALMON**, krill oil) every day for allergies,

Skin health, joint health, and general improved aging.

5. Give **Vitamin A and B** daily to prevent "Old Dog Warts" and other skin tumors and improve gland health.

5. For puppies to prevent allergies or **tear staining**, give a **non-flavored human probiotic** daily.

6. PLEASE make sure ALL pets and animals are treated with a **NEW generation parasite control**.

MILBEMYCIN BASED (nonBeef/nonChicken) - ALL-in-ONE heart-worm and intestinal parasite control

(Sentinel Flavor Tabs).

SIMPARICA every 30 days if itchy to prevent mites, chiggers, mosquitoes, fleas, and ticks.

or **Bravecto** every 30 days if itchy or every 60 days if not itchy.
